EXPERIENCE

HERE Technologies

Mumbai, India

Software Engineer II

June 2026 – Present

- Designed and implemented an end-to-end Validation-Repair-Analysis Pipeline automating data partitioning, repair workflows on EMR Studio, Lambda, and generation of profiling reports, violation summaries, and exception reports — reducing manual QA effort
- Designed and implemented a distributed concurrency-control mechanism (Tile Repair Guard) to prevent optimistic locking conflicts during parallel Spark execution, improving repair consistency across large-scale map processing workflows.
- Diagnosed and resolved 10+ production bugs affecting private map customers by leveraging advanced debugging techniques and validating end-to-end fix correctness through multiple regional runs on EMR Studio

Software Development Engineer Intern

June 2025 – June 2026

- Collaborated with the Map Making Automation Services (MMAS) team to maintain production flows, ensuring data integrity across millions of map features in HERE's global mapping pipeline
- Developed 100+ comprehensive JUnit test cases for the core validation library, ensuring correctness across 40+ validation rules for multiple map features and geographic profiles
- Optimized critical validation rules achieving 30–75% improvement in execution time through algorithmic enhancements and efficient data structure implementations
- Led schema migration effort by analyzing 100+ task classes, identifying breaking changes, and implementing requirements for the next-generation data model
- Utilized VisualVM profiling tools to identify and resolve bottlenecks in validation workflows, reducing processing time by up to 74% for high-priority features

TECHNICAL SKILLS

Programming Languages: Java (Advanced), Scala, Kotlin, Python

Cloud Technologies: AWS EMR, Lambda, CloudWatch, SageMaker, API Gateway, Amazon S3

Databases: MySQL, PostgreSQL, Amazon RDS, DynamoDB

Frameworks & Tools: Spring Boot, Apache Spark, REST APIs, Git, GitHub, GitLab, JUnit, VisualVM, Jira, IntelliJ

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Distributed Systems, Concurrency, System Design, Design Patterns

Certifications: AWS Certified Cloud Practitioner 

PROJECTS

Visitor Management System (Java, MySQL, QR Technology)

[GitHub](#)

- Engineered a Java-based visitor tracking application using Swing/AWT that reduced check-in time by 75%
- Integrated ZXing library for QR code generation and scanning, improving visitor processing speed by 3x compared to manual methods
- Designed normalized MySQL database schema achieving 99.9% data integrity

Hate Speech Recognition System (AI/ML, AWS)

[GitHub](#)

- Engineered a BiLSTM neural network model using TensorFlow/Keras achieving 83% accuracy across 6 toxicity categories
- Deployed serverless ML pipeline on AWS (SageMaker, Lambda, API Gateway, S3) handling 1000+ monthly active users with less than 500ms latency

EDUCATION

B.Tech Computer Science and Engineering

May 2026

Bennett University, Greater Noida

CGPA: 8.86

CBSE Class XII

May 2021

Army Public School, Noida

Score: 92%
